

Other services available to members through the **DTA Wales Energy Action Group:**

- Cost analysis
- Smart Metering
- Bill Validation
- Tenant Billing
- Metering
- Energy Efficiency – Energy Audit
- Asset Transfer
- Renewables

Energy Action Group:

The DTA Wales Energy Action Group lets members and other third sector groups purchase energy collectively – reducing bills and saving money.

This consortium scale Buying Group improves members' buying power by pooling their energy consumption.

This free, no obligation service, obtains competitive quotes on an annual basis and has a proven track record.

Additional benefits include regular bulletins on pressing energy matters, updates on emerging technologies that help members reduce energy consumption and many additional services that help make energy matters less complex and time consuming.

Other services available to members through the DTA Wales Energy Action Group:

COST ANALYSIS

Third party charges now account for 55% of electricity bills. Green taxes, transmission and distribution costs are continually changing and increasing. A detailed analysis of you bills could reveal cost saving opportunities.

- Get an instant and complete view of your energy consumption and costs.
- Combine consumption data with your tariff information to understand and potentially reduce complex charges
- Identify out-of-hours consumption
- Find the most expensive times of the day when using your energy
- Identify every cost hidden within your energy bills

SMART METERING

AMR (Automatic Meter Reading) devices are being installed throughout the UK. Are you prepared and ready to get the most from them?

- High quality energy data analysis: multi-utility, gas, electricity and water.
- Any meter, any utility, anywhere. You get access to powerful, industry leading analytics.
- Receive automatic reports alerting you to excess consumption

Delivering cost savings and environmental benefits

BILL VALIDATION

It is a known fact that there can be high levels of billing errors in energy bills. Invoice management ensures accurate supplier bills. Our service specialises in identifying errors, managing supplier disputes and recovering refunds due to group members.

- Fully Managed Service
- Invoice Processing
- Supplier Dispute Resolution

TENANT BILLING

Managing multiple tenants through different billing periods and for different services is complex and time consuming. Our Tenant Billing software makes this simple and eliminates this burden for busy staff members. Supplier contract and sub-tenant details are quickly recorded for multiple sites and multiple utilities.

- Reduce tenant queries and disputes
- Reduce time and money on administration
- Delivers greater clarity and confidence
- Flexibility to provide fortnightly monthly or quarterly bills

METERING

New premises? Moving site? Need new gas or electric connection? Want to save money by downgrading your meter?

- New connections and meter installation for gas electricity and water
- Increase or decrease of meter sizes
- Meter Disconnection and removal
- Meter Relocation
- Site works for new gas connections

ENERGY EFFICIENCY – ENERGY AUDIT

The development of this audit has been designed to help organisations to understand the issues they face, and provides guidance and solutions to the main energy issues in today's workplace.

- Looks at current processes in use on site
- Analyses your current meter set up
- Analyses your heating, air-conditioning, lighting and energy intensive processes
- Analyses your current tariffs
- Carries out a meter audit by site or by portfolio

ASSET TRANSFER

We have gained considerable experience of managing energy Asset Transfers over the last 4 years and have helped many organisations control this complex process that can be financially and administratively burdensome. Local authorities are under more and more pressure to consider asset transfers and this pressure can result in problems and failure.

- Expert advice on transferring energy assets
- Managing energy assets during transfer
- Identification of all site energy assets
- Liaising with all relevant parties
- Reconciliation of invoice data.

RENEWABLES

The increasing adoption of Solar PV, Wind Power and a variety of other micro-generation systems such as bio-mass, heat pumps and battery storage has created interesting and potentially confusing opportunities. We can provide you with clarity and guidance as to which systems are best adapted to your specific circumstances.

- Solar PV
- Battery storage
- Bio-mass
- Heat pumps
